

# CPS-i1500 1500W Lab Power Supply DIN-Rail

### Features:

- ST-HD Design for Baseplate Cooling on Demand
- Real time C/V programming
- Real time & value C/V-monitoring
- Reference voltage f. autonomous programming
- Inhibit for safe interlocking
- Remote Shutdown
- Sense control 2V per load line
- Power Good Relay DC-ok

- Precise dynamics on load change
- Series & parallel operation N+1
- Stepless fan controlled heat dissipation
- Electronic Inrush Limiter 14,7Arms
- EMC norm classe B
- Efficiency up to 94%
- Long lifetime under hard operation
- Quick down programming option PS

Model	Voltage [V]	Current [I]
CPS-i1500.018	0-18Vdc	0-75,0A
CPS-i1500.030	0-30Vdc	0-62,0A

CPS-i1500.400	0-400Vdc	0-4,7A

Camtec Power Supplies GmbH - Gewerbestrasse 30 - DE-76327 Pfinztal / Germany S.1/14 (03.2017.02.1) Tel. +49 (721) 46596 - 0 Fax +49 (721) 46596 - 77 <u>www.camtec-gmbh.com</u> - <u>info@camtec-gmbh.com</u> (Technical changes and errors. This product may not readily be used in life support systems.)

#### Technical description - a unique mechanical concept

The Camtec CPS-i models are high-precision lab power supplies "Made in Germany". These power supplies are designed for power systems in the testing automation.

For more than 20 years the Camtec Power Supplies manufactures high-end switch mode power supplies in Germany. A field breakdown of below 4 sigma over a 10 years period under review approves our ambitious quality concept. Each manufactured Camtec product passes several 100% random tests for each detailed function and a full-load Burn-In test.

Although it is not required from the safety norms our production applies a routine safety test to each manufactured device, even if it is an extra low-voltage model. The components in the assembled device pass stress aging to achieve an even level and to prevent from delayed failures. Our internal product engineering guidelines provide a clear target: Camtec product reputation must say "mount and forget". Quality is never a mere promise for our team.

The CPS-i1500 laboratory power supplies provide low noise and ripple, a very quick programming, and an absolutely precise setting at high load changes. With an efficiency up to 94% the devices are highly energy efficient.

Equipped with high-end capacitors of outstanding lifetime our power supplies guarantee a very long and reliable operation time. The circuit design of the CPS-i Series allows cope playing with complex loads. The internal protection circuits protect the power supply and the connected system, even in exceptional situations. The CPS-i series is protected from high transients by strong filters with high energy efficiency. All inputs and outputs and the interface are electrically isolated. The design specifications call for the highest standards of safety and interference suppression. The device was developed in accordance with the requirements of IEC/CSA/UL60950-1 and the EMC standards EN55022 Class B.

The forced air cooling system with load-dependent variable fan control, allows a detached position in the system. In selecting the fan, as with all our power supplies, in our opinion we use with the German manufacturer EBM Papst the highest quality and most reliable devices in the world market.

The special streight though controlled heat emission design supports easy baseplate cooling wit the help of an optional wall mount plate

#### **Features**

#### **Idling behavior**

The CPS-i Series is permanently open-circuit proof. When an output voltage is preset it comes stable. If a load is switched suddenly, the unit stabilized within <1ms. An overshoot of the output voltage is irrelevant.

#### Start behavior

The power supply has a start delay of 400ms to stabilize all measuring circuits for the interface messages accurately. The power supply starts with a ramp (soft start) of 100ms. The output voltage does not overshoot - regardless of whether a load is connected or not.

#### Galvanic isolation and insulation

The switching power supply is galvanically isolated between the input and the output. All major digital inputs and outputs of the interface are electrically isolated from the DC power outputs and sensing. The sensing, Ureg, Ireg, Umon, Imo and Iref are connected to the DC power output.

#### V programming (Ureg)

The output voltage of the CPS-i power supply can be adjusted by a control signal. The setting is linear to the input signal. The power supply operates data stable even at very low output voltages.

#### C programming (Ireg)

The output current of the CPS-i power supply can be adjusted by a control signal. The setting is linear to the input signal. The power supply operates data stable even at very low output currents.

#### V Monitor (Umon)

The power supply provides real-time monitoring of the output voltage. It is the exact and real value at the output terminals. If the sense line is used, the real value is measured directly at the load. The latency signal preset to the measured value is negligible, since the control circuit is constructed completely analogously.

#### C Monitor (Imon)

The power supply provides real-time monitoring of the output current. It is the exact and real value at the output terminals. The latency signal preset to the measured value is negligible, since the control circuit is constructed completely analogously.

#### Constant Voltage or Constant Current Mode (CV/CC)

The device can optionally be operated as a DC voltage source or a constant current source. The operating mode is signaled via LED.

#### **Reference Voltage (Uref)**

The devices feature an auxiliary reference voltage to operate external potentiometers. The Uref voltage can be set to 5,2V or 10,4V 5mA via the DIP-switch.

#### **Reference Voltage (Uref)**

The devices feature an auxiliary reference voltage to operate external potentiometers. The Uref voltage can be set to 5,2V or 10,4V 5mA via the DIP-switch.

#### Sense Mode

The power supply has a sense mode to compensate for voltage drops of 2V per load line.

#### Inhibit Mode (Interlock)

The inhibit circuit reliably prevents unintentional starting of the power supply. The control loop is internally locked. Since this blocking is done progressively it is active even when the control signal, is missing due to a cable break or temporarily suspends. A premature restart of the power supply is prevented.

The inhibit input can be connected to a relay or switch. If the contact is interrupted, the power supply is switched off. If the contact is closed again, the power supply restarts.

#### **External Shutdown (SD)**

All the models are featured with an external shutdown (switch/open collector)

#### **Digitale Interface**

The standard equipment of the power supply is an analog interface.

Optionally, the unit can be equipped upon request with a digital USB 2.0 interface. Options include a software and a DOM interface for easy control over standard software like LabView or others.

#### **DC Power Good Relay**

The power good relay connection indicates over device temperature and low AC supply voltage.

#### **Over Temperature Thermal Shutdown (OT)**

The device has a thermal monitoring: shutdown with automatic restart. The OT signal is applied to the interface.

#### Fast Down Programming & PowerSink (PS)

For fast down programming an internal PowerSink is offered as an option. The current sink discharges the output electrolytic capacitors and eleminates skidding inge fed tensions.

A further output allows to control external PowerSink modules. The internal current sink for quick programming must be installed at the factory.

#### ST-HD (ST Heat Dissipation)

Our aligned and controlled heat dissipation design opens possibilities that are formerly being reserved to custom design power supplies: Hard mount of the CPS-i1500 power supply modules on a wall allows easy access to base plate cooling.

In practice that means that one can mount the modules onto a thermal conducting wall to unsure that a sigificat part of the losses wil be transported directly out of the power supply unit.

#### Programming/Monitoring V/C Analog Interface (Ureg /Ireg) (Umon/Imon)

The standard programming of the CPS-i Series is an analog interface. The output voltage is linearly proportional to the adjusted analog control signal. If the control signal 0V and/or 0A applies the power supply delivers 0V at the output. The power supply is already working from 0V output voltage and low load with high precision.

The monitor signal is analog linear to the output voltage. The monitor signal for current and voltage is the real value that is measured directly at the output of the power supply. If a sense line is connected to compensate for the voltage drop across the load lines, the monitor signal is exactly the value that is measured at the connection point of the sense line. The description of the power supply in the sense operation is carried out in a separate section.

The analog inputs and outputs are non-floating. The mass is connected to the DC negative output

The adapter provides the ability to select the desired input / output via a DIP switch. The burden of the control voltages is  $1M\Omega$ . The burden of the current interface is  $500\Omega$ . The latency to full compensation of V/C on the interface from 0-100% is 15ms for all CPS-i models.

If the power supply is operated with a low load, the down-programming time up to the desired set point may be very long. The power supply has large built-in capacitors and an enormous energy reserve. A similar effect occurs by skidding input energy, which is not easily removed from the power supply. A PowerSink (PS) modul can be ordered as an option for each CPS-i power supply unit. The PS option is used for fast down programming and the degradation of skidding energy fed. The option must be equipped in the factory.

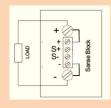

For further information about the PS option, please refer to the technical details in a separate section.

#### Compensation of Load Line Drop Voltage (Sense +/-), standard operation mode

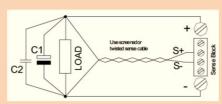

The CPS-i power supply has a Sense Mode to compensate for the voltage drop over long load lines. The compensation amounts to a maximum of 2V per load line. Under certain circumstances, it can be expected to apply fairly more complicated external interference suppression. If sense is not used, Sense + and Sense - shall necessarily be connected by short bridges to AUX + and AUX - (factory setup).

Sense operation: Remove the bridges between Sense +, Sense -. Connect the sense lines directly to the load. Pay attention to the polarity of plus and minus of the load to prevent damage to the power supply. To avoid interference, twist the sense lines. In order to reduce inductive effects, we recommend that the load lines position is close to each other. In order to supply a pulsating load, the use of an electrolytic capacitor and a cermic capacitor has proved. The internal Over Voltage Protection (OVP) of the power supply controls the DC power directly to the DC output terminals. In case of an error the OVP acts automatically (see OVP values corresponding table).

The sense terminals are directly connected to the power outputs.

Lokal Sensing (factory setup)

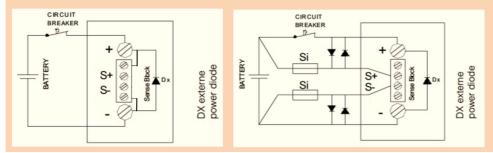

Remote Sensing (twisted sense lines)

### CAMTEC POWER SUPPLIES Made in Germany

#### Compensation of Load Line Drop Voltage (Sense ++/--) battery charger operation mode

#### Remote Sensing as a battery charger

If the CPS-i power supply unit is used as a battery charger, it is recommended to refrain from sensing. It can lead to severe damage to the power supply, if the polarity of the sense line is confused (field experience: such error often occurs when system service is required, e.g. when the batteries are changed). If it is absolutely necessary to use sensing, proceed as described in the figure below. Proven approaches are 250mA for the fuses and 3...5A load capacity of diodes.

#### External Shutdown (SD)

The power supply is set to the Shutdown mode, when the control input is either shorted via a relay contact, a switch contact or an NPN transistor with open collector (voltage drop <1V, current typ. 1,5mA).

If the shutdown repeals the power supply starts again.

Using the soft start the current and the voltage rises within continuously to the default set values. Between control input SD, power input and power output is a reinforced Isolation of max. 400Vdc.

#### Inhibit / Interlock (INH)

The power supply is equipped with a control input Inhibit (INH) to interlock a DC-shutdown of the power supply.

For the nominal operation of the power supply the connections of the control input "INH" must always be short-circuited. The power output is switched off as soon as the connection between the contacts of the control input INH is interrupted. If Inhibit is repealed, the power supply starts again. Using the soft start the current and the voltage rises continuously to the default set values. Between control input INH, power input and power output is a reinforced Isolation of max. 400Vdc. Between the INH contacts applies a current of typical 2mA.

## ! Warning against damage in case of incorrect connection assignment

Never apply any external voltage to the control input INH. Never connect a resistor to the INH interface. Between control input INH, power input and power output is a reinforced Isolation of max. 400Vdc.

Camtec Power Supplies GmbH - Gewerbestrasse 30 - DE-76327 Pfinztal / Germany S.8/14 (03.2017.02.1) Tel. +49 (721) 46596 - 0 Fax +49 (721) 46596 - 77 <u>www.camtec-gmbh.com</u> - <u>info@camtec-gmbh.com</u> (Technical changes and errors. This product may not readily be used in life support systems.)

#### Power-OK Relay (DC Power Good)

The alarm signal DC OK has potential-free relay contacts. The contacts are closed (relay coil is energized) when the power output is active. In (SD) shutdown or in (INH) inhibit mode, the contacts are closed. The contacts are open when the power output is inhibited by OT or low AC supply voltage at the AC inputs. Contact load (resistive load): 30Vdc/1A, 60Vdc/0.3A, 30Vac/0.5A. Betwenn the intermediate relay contact, power input and the power output is a reinforced Isolation max. 400Vdc.

#### **Over Voltage Protection (OVP)**

If an over-voltage occurs to the output (for example, defective components, external feed voltage), it is followed by the shutdown of the power output. A periodic restart attempts (ticker operation period 400ms).

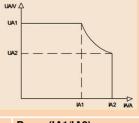

#### Over Temperature Shutdown (OT)

The alarm LED OT lits when the temperature of the power supply is higher than the over-temperature protection threshold.

#### C/V Chart and Operating Point

The output voltage set Vout is always linear proportional to the control signal Ureg.

The desired control signal is selected via the DIP switcher: 0-5V, 0-10V, 0-20mA oder 4-20mA.

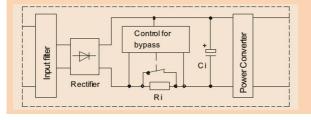

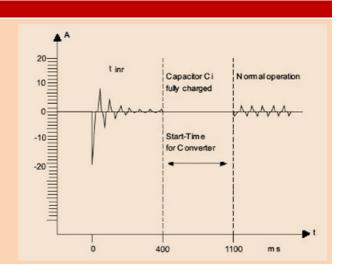

Model	Value UA1 (V)	Value IA1 (A)	Value UA2 (V)	Value IA2 (A)	Pmax (IA1/IA2)
CPS-i1500.018	18Vdc	75A	18Vdc	75A	1350/1350W
CPS-i1500.030	30Vdc	50A	24Vdc	62A	1500/1488W
CPS-i1500.060	60Vdc	25A	48Vdc	31A	1500/1488W
CPS-i1500.090	90Vdc	16,7A	72Vdc	21A	1503/1512W
CPS-i1500.150	150Vdc	10A	120Vdc	12,5A	1500/1500W
CPS-i1500.300	300Vdc	5A	240Vdc	6,3A	1500/1512W
CPS-i1500.400	400Vdc	3,7A	320Vdc	4,7A	1480/1504W

#### Inrush Current Protection (electronic)

The power supply unit has an electronic current limiter  $(230Vac=14,7A_{rms}/20,7A_{peak})$ .

It is a precisely working circuit instead of a usual simple NTC solution. The accuracy is  $\pm 10\%$ , regardless of the operating temperature and the duty cycles (interval  $\geq 10$ s). We recommend the smallest circuit breaker a characteristic B with 16A.

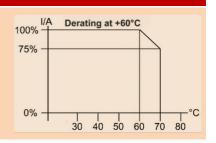

Camtec Power Supplies GmbH - Gewerbestrasse 30 - DE-76327 Pfinztal / Germany S.9/14 (03.2017.02.1) Tel. +49 (721) 46596 - 0 Fax +49 (721) 46596 - 77 <u>www.camtec-gmbh.com</u> - <u>info@camtec-gmbh.com</u> (Technical changes and errors. This product may not readily be used in life support systems.)

#### **Temperature Derating**

The maximum ambient temperature during operation is + 70°C. If the overtemperature protection is activated, the power supply but not the fan is switched off.

The measuring point is 10mm outside the power supply. The power supply unit starts automatically when it has cooled down.

#### **Series Operation**

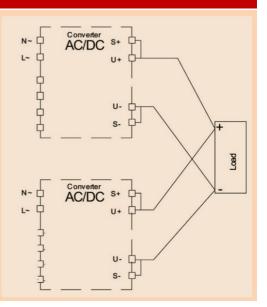

Two or more units of the same model and output voltage can be operated up to a total voltage of 600Vdc in series. Due to the dielectric strength of the internal components used, only the models with an output voltage of 90Vdc and later are approved for series operation. Other power supplies are not approved for series operation above 60Vdc.

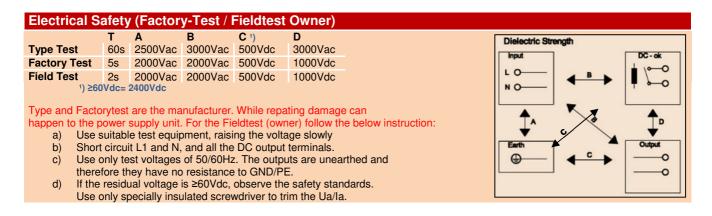

If the units are remotely controlled via the analog interface it is compulsory to use a potential-free control voltage!

#### Parallel Operation & N+1 Decoupling

In order to increase the overall power of the power supply, two or more devices of the same model with the same output voltage may be operated in parallel. We recommend using a busbar for the DC power connector. Make sure that the cable lengths and cable cross-sections of all power supplies to the busbar or to the star point are identical. If you want to use the sensing function, connect it also to the star point or busbar. To avoid measurement errors, select the line length from the neutral point or from the busbar to the load as short as possible and use the maximum possible conductor cross-section.

The CPS-i models have no internal O-ring diode, to operate the devices N+1 redundant.

Camtec Power Supplies GmbH - Gewerbestrasse 30 - DE-76327 Pfinztal / Germany S.10/14 (03.2017.02.1) Tel. +49 (721) 46596 - 0 Fax +49 (721) 46596 - 77 www.camtec-gmbh.com - info@camtec-gmbh.com (Technical changes and errors. This product may not readily be used in life support systems.)

# **Available Options**

#### PS Option for Quick Downward Programming (PSOPT)

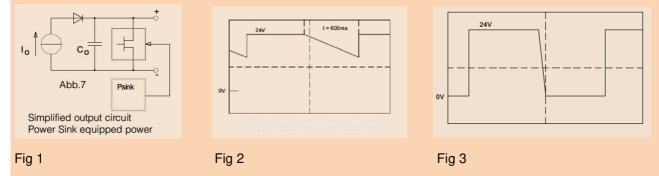

#### **Quick Down Programming:**

The input capacitance of a power supply can be discharged only slowly at low load. A quick downward programming of the output voltage of an almost non-loaded power supply is not possible. This fact leads to undesirably long cycle times on a test bench. The PS option works as an electronic circuit. It communicates with the control circuit of the power supply and therefore permits a much higher dynamics of the system, as an external passive base load.

#### **Back-Feed Energy:**

In the back-feed power by a consumer a regenerative current is charging the output capacitors. The output voltage will increase. The following formula shows dv/dt=i/C.

When an electronic current sink is used, the output voltage remains constant at the set value. The current sink provides a fast dynamic response.

A Power Sink (see Fig. 1) enables fast down programming at low load conditions or without a load. For comparison, see Figure 2 (without) and Figure 3 (with PS option).

The PS-option must be installed in the plant, because it is not accessible from the outside. It is necessary to match the power supply after installation and perform electrical safety testing. We therefore recommend a required a necessary PowerSink option to be purchased with the power supply unit.

#### **Retrofit PS option:**

Individual trained CPS-i dealer are pre-retrofit able. Alternatively, a CPS-i power supply may also be sent to the factory. Please apply for this an RMA number from our service.

#### **Test Certificate and Calibration**

Optionally we offer with the delivery of a CPS-i power supply a Manufacturer's Inspection Certificate of electrical setpoint / actual values. The power supply then is "calibrated". Such Manufacturers Calibration Certificate for each power supply can uniquely be assigned via the device serial number.

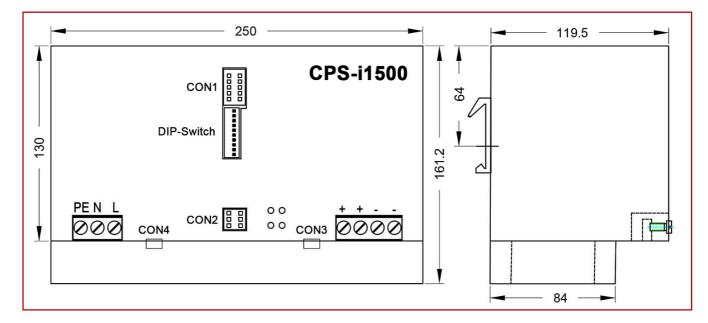

A manufacturer calibration of a CPS-i can frequently be done via controlled recirculation on a regular basis. Please request the help of your local CPS-i dealer or contact us directly: service@camtec-gmbh.com

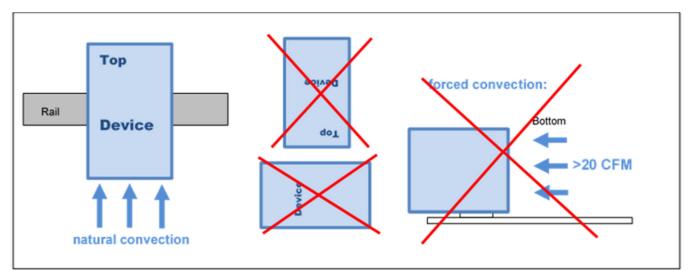

#### ST-HD Baseplate Cooling & Temperature Management

The temperature management of the CPS-i1500 series provides a direct dissipation of the main energy losses. The internal coolers of the output diodes and the power FETs connect to the back plate cooler. It is possible to dissipate about 40 - 50% of the energy losses out of a system while using the Baseplate cooling bundle 2201002001 to hard mount the unit to a plane and heat conductive surface.

Camtec Power Supplies GmbH - Gewerbestrasse 30 - DE-76327 Pfinztal / Germany S.11/14 (03.2017.02.1) Tel. +49 (721) 46596 - 0 Fax +49 (721) 46596 - 77 <u>www.camtec-gmbh.com</u> - <u>info@camtec-gmbh.com</u> (Technical changes and errors. This product may not readily be used in life support systems.)

Mounting Instruction: recommended ai rflow space below and above is 50mm (2 Inch)

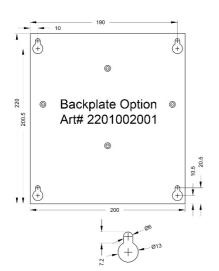

#### Mechanics & Installation Instruction of the CPS-i1500

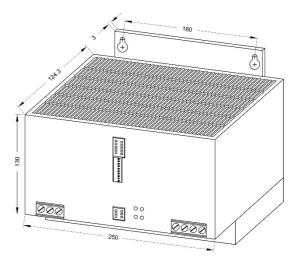

Stable metal/aluminium housing IP20. To allow adequate convection, a free air space of 50mm (top/bottom) and 10mm (sidewalls) is required; and for active devices 15mm space from the sidewalls. For proper air convection it is necessary to install the CPS-i1500. One can use the DIN-Rail installation (equiped standard) with our patented 35mm DIN-Rail bracket according to EN60275. It is easy to mount/dismount while snaping it onto the 35mm DIN-Rail - no tools necessary. A wallmount back plate (option) is available, too.

It is not allowed to install the CPS-i1500 in other mounting direction then as shown in the drawings.

Camtec Power Supplies GmbH - Gewerbestrasse 30 - DE-76327 Pfinztal / Germany S.12/14 (03.2017.02.1) Tel. +49 (721) 46596 - 0 Fax +49 (721) 46596 - 77 <u>www.camtec-gmbh.com</u> - <u>info@camtec-gmbh.com</u> (Technical changes and errors. This product may not readily be used in life support systems.)

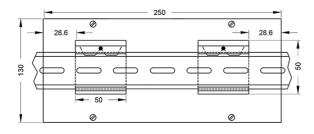

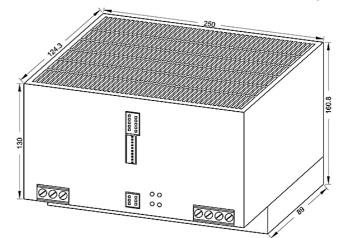

#### **Back Plate Option / DIN-Rail Standard**

(The CPS-i1500 is always delivered for DIN-rail mount, the back-plate is an optional part that shall be mounted from the customer. The threads from the DIN-rail mounting brackets shall be used. All screws are included into the Back Plate Kit.)

Safety regulations: Please read these instructions completely before using the equipment. Keep these instructions on to hand. The device may only be operated by trained specialist staff.

#### Installation:

1) The device is designed for devices and systems that meet the standard requirements for hazardous voltages, power and fire prevention.

2.) Installation and service only by trained persons. The AC power must be switched off. The work is to be labeled; accidental reconnection of the system must be prevented.

3.) Opening the device, its modification, loosening bolts or operation outside the specified herein specification or in an unsuitable environment, has the immediate loss of warranty to follow. We disclaim any responsibility for any resulting damage to persons or things.

4.) Note: The device must not be operated without an upstream circuit breaker (CB). We recommend the use of B-Type 16A. It is prohibited to use the unit without PE. It may be necessary upstream device has a power switch.

#### Warning:

### Non-compliance can result in fire and serious injury or death.

 Operate the appliance without PE connection.
Before connecting the device to the AC network, make wires free of voltage and assure accidently switch on.

 Allow neat and professional cabling.
Never open nor try to repair the unit. Inside are dangerous voltages that can acause electrical shock hazard.

5. Avoid metal pieces or other cunductive material to fall into the item

6. Do not operate the device in damp or wet conditions

7. Do not operate the unit under EX-conditions

All parameters after 15 minutes of continuous operation at full load / 25°C / 230Vac 50/60Hz, unless otherwise indicated.
