Device Manual

> INSTALLATION

To set the product, follow the instruction on the picture below:

- 1) Fix the Casambi Dimmer to the aluminium profile by the provided thermal biadhesive
- 2) connect the LED in the output of the dimmer
- 3) connect the power supply in the input of the dimmer

<u>DIMMER CASAMBI</u> as any other Casambi product, should not be placed in a metal enclosure or next to large metal structures. Metal will effectively block all radio signals which are crucial to the operation of the product.

TECHNICAL NOTE

Installation:

- Installation and maintenance must be performed only by qualified personnel in compliance with current regulations.
- The product must be dissipated correctly.
- Keep separated the circuits at 230V (LV) and the circuits not SELV from circuits to low voltage (SELV) and from any connection with this product. It is absolutely forbidden to connect, for any reason whatsoever, directly or indirectly, the 230V mains voltage to the bus or to other parts of the circuit.

Power Supply:

- For the power supply use only a SELV power supplies with limited current, short circuit protection and the power must be dimensioned correctly. In case of using power supply with ground terminals, all points of the protective earth (PE = Protection Earth) must be connected to a valid and certified protection earth.
- The connection cables between the power source "low voltage" and the product must be dimensioned correctly and they should be isolated from every wiring or parts at voltage not SELV. It is suggested to use double insulated shielded.
- Dimension the power supply for the load connected to the device. If the power supply is oversized compared with the maximum absorbed current, insert a protection against over-current between the power supply and the device.

Outputs:

•	The length of the connection	cables between the produ	ct and the LED module	must be less than 10m;	the cables must be d	imensioned co	rrectly and
th	ev should be isolated from e	every wiring or parts at volta	ae not SELV. It is sugge	ested to use double insul	lated shielded and tw	isted cables.
