Product Description

The CP20.241-R1 is a DIN-rail mountable single-phase-input power supply of the DIMENSION series with a built-in decoupling MOSFET for redundant power supply systems. It provides a floating, stabilized and galvanically separated SELV/PELV output voltage.

Intended Use

This device is designed for installation in an enclosure and is intended for general use such as in industrial control, office, communication, and instrumentation equipment. Do not use this device in equipment, where malfunction may cause severe personal injury or threaten human life.

Installation Notes

- This device does not contain serviceable parts. The tripping of an internal fuse is caused by an internal defect. If damage or malfunction should occur during installation or operation, immediately turn power off and send the device to the factory for inspection.
- Install device in an enclosure providing protection against electrical, mechanical and fire hazards.
- Install the device onto a DIN-rail according to EN 60715 with the input terminals on the bottom of the device. For other orientations see de-rating requirements in the datasheet.
- Make sure that the wiring is correct by following all local and national codes. Use appropriate copper cables that are designed for a minimum operating temperature of 60°C for ambient temperatures up to +45°C, 75°C for ambient temperatures up to +60°C and 90°C for ambient temperatures up to +70°C. Ensure that all strands of a stranded wire enter the terminal connection.
- For use in a controlled environment. Do not use the device in pollution degree 3 areas without additional protection or in applications where a degree of protection better than IP20 is required.
- The device is suitable to be supplied from TN-, TT- and IT mains networks. The voltage between the L or N terminal and the PE terminal must not exceed 300Vac continuously acc. to IEC 62477-1.
- The device is designed for use in overvoltage category II zones according to IEC 60950-1 or UL 508 and overvoltage category III zones according to IEC 62477-1.
- The input can also be powered from batteries or similar DC sources. The voltage between the (+) or (-) input terminal and the PE terminal must not exceed 375Vdc continuously acc. to IEC 62477-1.
- A disconnecting means shall be provided for the input or output of the device when used in applications according to CSA C22.2 No 107.1-01 or CSA C22.2 No 107.1-16.
- The device is designed as "Class of Protection I" equipment according to IEC 61140. A PE (Protective Earth) connection is required.
- The output is electronically protected against no-load, overload and short circuit and can supply any kind of loads, including unlimited inductive loads and capacitive loads up to 1F.
- Do not apply return voltages from the load to the output higher than 35V.
- The device is designed for convection cooling and does not require an external fan. Do not obstruct airflow and do not cover ventilation grid (e.g. cable conduits) by more than 15%!
- The device is designed for altitudes up to 6000m. See details in the product datasheet for additional requirements above 2000m.
- Keep the following minimum installation clearances when the device is permanently loaded with more than 50% of the nominal current: 40mm on top, 20mm on the bottom, 5mm left and right side. Increase the 5mm to 15mm in case the adjacent device is a heat source.
- The device is designed, tested and approved for branch circuits up to 32A (IEC) and 30A (UL) without additional protection device. If an external fuse is utilized, do not use circuit breakers smaller than 10A B- or C-Characteristic to avoid a nuisance tripping of the circuit breaker.
- The maximum surrounding air temperature is +70°C / +158°F. The operational temperature is the same as the ambient or surrounding air temperature and is defined as the air temperature 2cm below the device.
- For suitable accessories, such as mounting brackets or supplementary devices, see product datasheet.

Functional Description

- The output of the device is equipped with a decoupling MOSFET for 1+1 and n+1 redundant use.
- The green DC-OK LED reports an output voltage above 22Vdc of a running device.
- The DC-OK relay monitors the output voltage and the contact is closed, when the DC-OK LED is on. Contact ratings: 60Vdc 0.3A, 30Vdc 1A, 30Vac 0.5A for resistive loads.
- The device is equipped with an over-temperature protection. In case of a high temperature, the output shut-down and starts automatically again after cooling off.
- The device is equipped with the Hiccup^{PLUS} overload characteristic. At heavy overloads (when output voltage falls below 13V), the device delivers continuous output current for 2s. After this, the output is switched off for approx. 18s before a new start attempt is automatically performed. This cycle is repeated as long as the overload exists. If the overload has been cleared, the device will operate normally.
- The device is featured with a "soft output regulation characteristic" in order to achieve current share between multiple devices, when they are connected in parallel. The "soft output regulation characteristic" regulates the output voltage in such a manner that the voltage at no load is approx. 4% higher than at nominal load.
- Devices can be paralleled to increase the output power. See product datasheet for allowed output current depending on the ambient temperature.
- Devices of the same type can be connected in series for higher output voltages. It is possible to connect as many devices in series as needed, providing the sum of the output voltage does not exceed 150Vdc. Avoid return voltages from the load to the output.
- In case of an internal defect, a redundant circuit limits the maximum output voltage to 32V. The output shuts down and automatically attempts to restart.
