## Technical Notes

- The 0÷10V control input is compatible with sinking/sourcing 1÷10V controls  
In 1÷10V control mode without external current source, the current source of the product must be activated, as shown on connection scheme.
- Installation and maintenance must be performed only by qualified personnel in compliance with current regulations.
- The product must be installed inside an electrical panel protected against overvoltages
- For the power supply it is preferable to use a SELV power supply. In the case of using class I power supply, ALL points of the protective earth (PE = Protection Earth) must be connected to a valid protection earth .
- Keep 230V cables separate from circuits to low voltage (SELV)
- For the connection of the button, potentiometer, 0÷10V, 1÷10V inputs it is preferable to use shielded and twisted cables and do not exceed the recommended length of 10m.
- To connect the DMX512+RDM, Modbus and DALI bus use cables as per specification of the respective protocols and regulations.
- It is absolutely forbidden to connect, for any reason whatsoever, directly or indirectly, the 230V mains voltage to the bus or to other parts of the circuit.
