DNKS0.5-7815		22μF/25V

Note:

- The required capacitors C1 and C2 (C3 and C4) must be connected as close as possible to the terminals of the module;
- Refer to Table 1 for C1 and C2 (C3 and C4) capacitor values. For certain applications, increased values and/or tantalum or low ESR electrolytic capacitors may also be used instead;
- When using configurations as shown in figure 3, we recommended to add an inductor (LDM) with a value of up to 10μH which helps reducing mutual interference;
- Converter cannot be used for hot swap and with output in parallel;
- To further reduce the output ripple and noise, we suggested the use of a "LC" filter at the output terminals, with an inductor value (L) of 10μH-47μH.
