 Series Name      Input Voltage (VDC)      No Assembly      Assembly Option

DOS30: SMD TYPE  
DOH30: SIP TYPE

05: 4.5~5.5  
12: 6~14

- : Remote On/Off Negative Logic
- P: Remote On/Off Positive Logic
- S: Current Share
- E: Extra GND pin 2 extra GND pins only for SMD TYPE
- L: Long Pins 5.08mm±0.25mm only for SIP TYPE

**TECHNICAL SPECIFICATION** All specifications are typical at nominal input, full load and 25°C unless otherwise noted

**THERMAL CONSIDERATIONS**

The power module operates in a variety of thermal environments; however, sufficient cooling should be provided to help ensure reliable operation of the unit. Heat is removed by conduction, convection, and radiation to the surrounding Environment. Proper cooling can be verified by measuring the point as the figure below. The temperature at this location should not exceed 115°C. When Operating, adequate cooling must be provided to maintain the test point temperature at or below 115°C. Although the maximum point Temperature of the power modules is 115°C, you can limit this Temperature to a lower value for extremely high reliability. The unit will shutdown if the thermal reference point exceeds 125°C (typical), but the thermal shutdown is not intended as a guarantee that the unit will survive temperature beyond its rating. The module will automatically restart after it cools down.

## OUTPUT VOLTAGE PROGRAMMING

Output voltage programmable from 0.8V to 5.0V by connecting a single resistor (shown as Trim Table) between the Trim and GND pins of the module. To calculate the value of the resistor Rtrim for a particular output voltage Vout, use the following equation:

■ **Rtrim Equation** :  $R_{trim} = \left[ \frac{1200}{V_{out} - 0.80} - 100 \right] \Omega$

**Trim Table**

Vout(set) (VDC)	Rtrim (kΩ)
0.8	Open
1.2	2900
1.5	1614
1.8	1100
2.5	605
3.3	380
5.0	185
