

E0-3-011 C/3

3.2 Turn On Delay

During turn on and turn off, no output voltage shall exceed its nominal voltage by more than  $\underline{10\%}$  and no output shall change its polarity with respect to its return line. All outputs shall reach their steady state values within  $\underline{3}$  seconds of turn on.

3.3 Hold Up Time <u>10</u> ms minimum at <u>115Vac/60Hz</u> input at maximum load, and <u>20</u> ms minimum at <u>230Vac/50Hz</u> input at maximum load.

#### 3.4 Typical Efficiency

The efficiency (watts out / watts in) shall be higher than \_\_\_\_\_ typical while measuring at nominal line and maximum load condition, test in 1 minute after power on.

3.5 Output Transient Response The power supply shall maintain output transient response time within \_\_\_\_\_ with a loading current change from 20% to 80% of maximum current and 0.5A/µs rise up /drow down test at end of output terminal.

# 4. PROTECTION REQUIREMENT

4.1 Over-Voltage Protection

Over-voltage protection shall be included in the adaptor circuit. A single component failure must not cause an over voltage.

- 4.2 Over-Current ProtectionThe adaptor must have a current limiting function on the output voltage. in overload mode, the output must drop to a low voltage.
- 4.3 Short-Circuit ProtectionThe adaptor must withstand a continuous short circuit on the output without damage.

# 5. ENVIRONMENTAL CONDITIONS

5.1 Operating

The power supply shall be capable of operating normally in any mode without malfunction happens in the following environmental conditions.

5.1.1 Operating Temperature: 0°C  $\,{\sim}40\,^\circ\!{\rm C}\,$  (Can operate normally) Relative Humidity: 10%  ${\sim}$  90%

Altitude: Sea level to 2,000 m.

- 5.1.2 Vibration: 1.0mm, 10-55Hz, 15 minutes per cycle for each axis (X, Y, Z).
- 5.1.3 Cooling: Natural convection cooling
- 5.2 Non Operating

The power supply shall be capable of withstanding the following environmental conditions extended periods of time, without sustaining electrical or mechanical damage and subsequent operational deficiencies.

TEN PAO P/N	REV.	DATE	SHEET	
R026940V-V	0	Aug. 23,2016	Page 5 d	of 17

- 5.2.1 Storage Temperature: -30  $^\circ\!\mathrm{C}$   $\sim$  70  $^\circ\!\mathrm{C}$
- 5.2.2 Relative Humidity:  $10\% \sim 90\%$
- 5.2.3 Altitude: Sea level to 2,000 m.
- 5.2.4 Vibration and Shock:

The power supply shall be designed to withstand normal transportation vibration per <u>MIL–STD-810D</u>, method 514 and procedures X, as it is mounted in the chassis assembly and packed for shipping.

## 6. RELIABILITY AND QUALITY CONTROL

### 6.1 MTBF

When the power supply is operating within the limits of this specification the MTBF shall be at least **50,000** hours at 25  $^{\circ}$ C (MIL-HDBK-217F).

6.2 Burn-In

The power supply shall withstand a Burn-In test under full load at  $35^{\circ}$ C ~40°C room temperatures, after test, product shall operate normally.

6.3 Component Derating

Semiconductor junction temperatures shall not exceed the manufacturer's maximum thermal rating.

# 7. MECHANICAL CHARACTERISTICS

7.1 Physical Dimensions

The detail dimension of the power supply is drawed on APPENDIX A.

7.2 Nameplate

The label of the power supply, please see APPENDIX C.

7.3 Drop test

Dropped freely from 1 m (for wall mount product) height onto the surface is consisted of hardwood 13 mm thick, mounted on two layers of plywood each 19-20 mm thick, all supported on concrete floor 1 time from 3 different surface, after test, it's no safety damage for product.

### 8. SAFETY

8.1 Safety Standard

The power supply shall be certified under the following international regulatory standards
