DC/DC Converter

URF48_QB-150W(F/H)R3 Series

MORNSUN®

150W isolated DC-DC converter
Ultra-wide input and regulated single output

CE Patent Protection RoHS

FEATURES

- Ultra-wide 4:1 input voltage range
- High efficiency up to 91%
- I/O isolation test voltage 2.25k VDC
- Input under-voltage protection, output short-circuit, over-current, over–voltage, over-temperature protection
- Operating ambient temperature range: -40℃ ~ +85℃
- Five-sided metal shielded package
- Industry standard ¼-Brick package and pin-out
- EN62368 approved

URF48_QB-150W(F/H)R3 series are isolated 150W DC-DC products with 4:1 input voltage. They feature efficiency up to 91%, 2250VDC input to output isolation, operating ambient temperature of -40℃ ~ +85℃, input under-voltage, output short circuit, over-current, over–voltage over-temperature protection. The products meet CLASS A of CISPR32/EN55032 EMI standards by adding the recommended external components and they are widely used in applications such as battery powered systems, industrial controls, electricity, instrumentation, railway, communication and intelligent robotic.

Selection Guide

Certification	Part No.①	Input Voltage (VDC)		Output		Full Load Efficiency(%) Min./Typ.	Max. Capacitive Load(μF)

Note:
①Use"F"suffix is for added aluminum baseplate and "H" suffix for heat sink mounting. We recommend to choose modules with a heat sink for enhanced heat dissipation and applications with extreme temperature requirements;
②Exceeding the maximum input voltage may cause permanent damage.

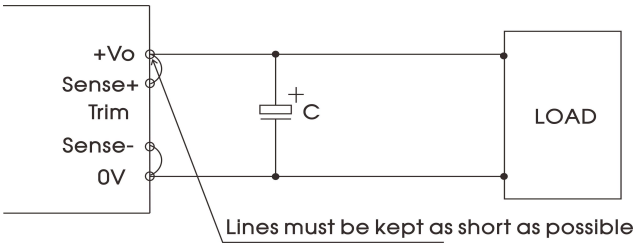
Notes:

1) Product application thermal design should be referred to the recommended PCB layout and recommended heat dissipation structure, please see DC-DC Converter Application Notes for specific operation.

Remote Sense Application

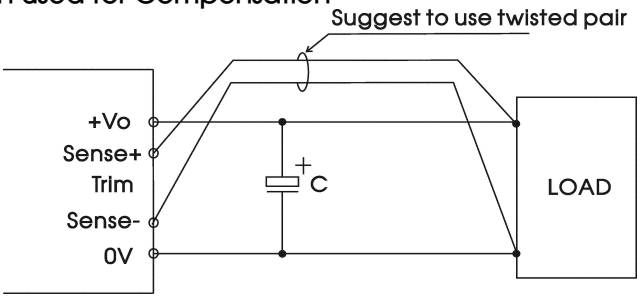
1. Remote Sense Connection if not used



Notes:

(1) If the sense function is not used for remote regulation, the user must connect the +Sense to + Vo and -Sense to 0V at the DC-DC converter pins.
(2) The connections between Sense lines and their respective power lines must be kept as short as possible, otherwise they may be picking up noise, interference and/or causing unstable operation of the power module.

2. Remote Sense Connection used for Compensation



Notes:

(1) Using remote sense with long wires may cause unstable output, please contact technical support if long wires must be used.
(2) PCB-tracks or cables/wires for Remote Sense must be kept as short as possible. Twisted pair or shielded wire are suggested for remote compensation and must be kept as short as possible.
(3) We recommend using adequate cross section for PCB-track layout and/or cables to connect the power supply module to the load in order to keep the voltage drop below 0.3V and to make sure the power supply's output voltage remains within the specified range.
(4) Note that large wire impedance may cause oscillation of the output voltage and/or increased ripple. Consult technical support or factory for further advice of sense operation.

Design Reference

1. Typical application

(1) We recommened using the recommended circuit shown in Fig.1 during product testing and application, otherwise please ensure that at least a 220μF electrolytic capacitors is connected at the input in order to ensure adequate voltage surge suppression and protection.
(2) We recommened increasing the value of Cin and pay attention to the unstable input voltage if the product input side is paralleled with motor drive circuit and/or larger energy transient circuits, to ensure the stablity of input terminal and avoid repeatedly start-up problems due to input voltage lower than undervoltage protection point.
(3) We recomended increasing the output capacitance with limited to the capactive load specification and/or increasing the voltage clamping circuit(such as TVS) if the output terminal is inductive device such as relay or a motor, to ensure adequate voltage surge suppression and protection.
(4) Input and/or output ripple can be further reduced by appropriately increasing the input & output capacitor values Cin and Cout and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

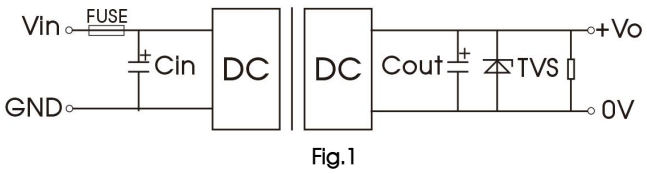


Fig.1

Vout(VDC)	Fuse	Cin*	Cout	TVS
5	15A, slow blow	220μF	470μF	SMDJ6.0A
12			220μF	SMDJ14A
15				SMDJ17A
24			100μF	SMDJ28A
48				SMDJ54A

Note:
*Please pay attention to the ambient temperature of the product when using an external capacitor, increase the electrolytic capacitor values to at least 1.5 times the original parameter if the ambient temperature is low(such as -25℃).

2. EMC solution-recommended circuit

We recommened using the recommended circuit shown in Fig.2 during product EMC testing and application.

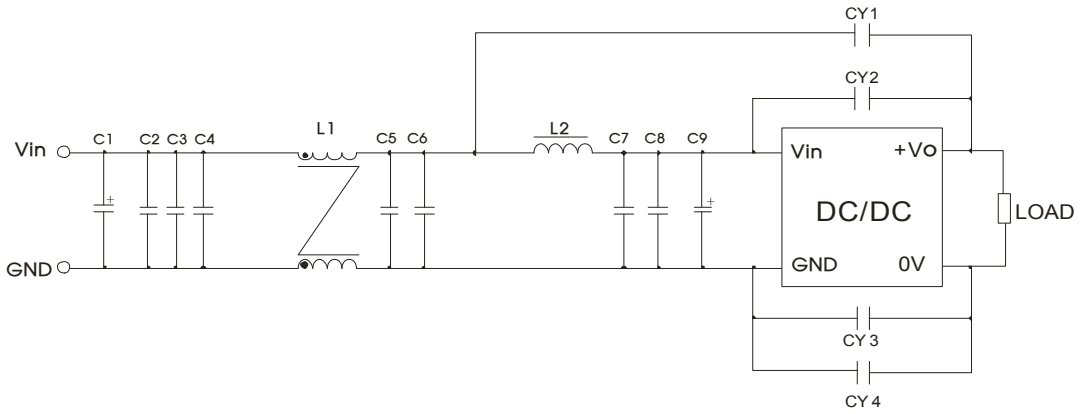

Fig. 2

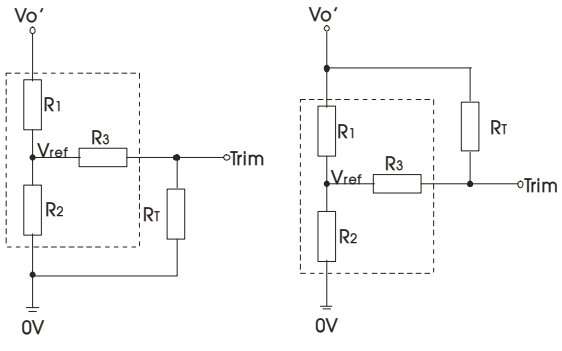
Components	Recommended Component value
C1	150μF/100V electrolytic capacitor
C9	47μF/100V electrolytic capacitor
C2、C3、C4、C5、C6、C7、C8	2.2μF/100V ceramic capacitor
L1	1.0mH/15A common mode inductor
L2	1.5μH/15A inductance
CY1、CY2、CY3、CY4	1nF Y1 safety capacitor

3. Trim Function for Output Voltage Adjustment (open if unused)



TRIM resistor connection (dashed line shows internal resistor network)

Calculation formula of Trim resistance:

$$\text{up: } R_T = \frac{aR_2}{R_2 - a} - R_3 \qquad a = \frac{Vref}{Vo' - Vref} \cdot R_1$$

$$\text{down: } R_T = \frac{aR_1}{R_1 - a} - R_3 \qquad a = \frac{Vo' - Vref}{Vref} \cdot R_2$$

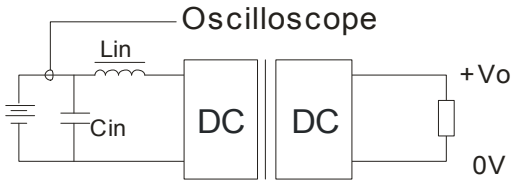
R_T = Trim Resistor value; a = self-defined parameter

Vo'= desired output voltage (±10% max.

Vout(VDC)	R1(KΩ)	R2(KΩ)	R3(KΩ)	Vref(V)
5	3.036	3	10	2.5
12	11.00	2.87	15	2.5
15	14.03	2.8	15	2.5
24	24.872	2.87	15	2.5
48	53.017	2.913	15	2.5

Note: When using the Trim down function make sure that the RT resistor value is calculated correctly. If the Trim pin is shorted with +Vo, or its value is too low, then the output voltage Vo would be lower than 0.9Vo, which may cause the product to fail.

4. Reflected ripple current--test circuit



Note:Lin(4.7μH) , Cin(220μF, ESR < 1.0Ω at 100 KHz)

5. The products do not support parallel connection of their output.

6. We recommended the use of a converter with higher output power capability to cover applications with higher power requirements.
